### **EXAMINER'S AMENDMENT**

Applicant's election with traverse of Invention I in the reply filed on August 10, 2004 is acknowledged. Because no arguments were made, this has been treated as an election without traverse.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 8-10, 17, 23 and 31-34 have been canceled.

The following is an examiner's statement of reasons for allowance: the groove of Fortin et al. (French Patent 2691728) does not meet the recitation of a mirror-image configuration of the tongue because the groove also accommodates pin (40), thereby making the shape of the groove very much unlike the shape of the tongue. If the outer surface of pin (40) is considered to be a defining surface with respect to the groove, then the limitation of "said groove and tongue having one contiguous surface" cannot be met. Making the pin integral with the barrier (i.e., one contiguous surface) would be contrary to the purpose and function of the interconnection of Fortin et al. Fortin et al. also lacks the configurations recited with respect to the side walls. No other prior art teaches a barrier having the off-center tongue and groove with beveled ends on each opposing side of a barrier.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
